Material cut length planning sheet

Check required lengths before purchasing or cutting materials.

Three steps

1. Measure actual pieces
2. Multiply length by quantity
3. Account for kerf and waste

A worked example

Piece	Shelf trim
Length	60 cm
Count	4
Total length	240 cm

Four 60 cm pieces need 240 cm before waste.

Use safe tools and appropriate guidance.

Material cut length planning sheet

Use one row per item or decision. Start with what you know.

Piece	Length	Count	Total length
