Plant care reference index

Keep species-specific care references in one place.

Three steps

1. Identify plants
2. Record their locations
3. Save a reliable care reference

A worked example

Plant	Pothos
Location	Living room
Light guidance	Indirect light
Care reference	Species guide

Use the reference rather than assuming every plant needs the same care.

Avoid universal watering rules.

Plant care reference index

Use one row per item or decision. Start with what you know.

Plant	Location	Light guidance	Care reference
