Project quote minimum calculator

Estimate a minimum quote using time and direct expenses.

Three steps

1. Estimate deliverable hours
2. Add costs and contingency
3. Confirm scope before quoting

A worked example

Hours	12
Target rate	40
Expenses	30
Contingency	50
Quote	560

12 times 40 plus 30 plus 50 gives 560.

A quote is a planning estimate.

Project quote minimum calculator

Use one row per item or decision. Start with what you know.

Hours	Target rate	Expenses	Contingency	Quote
