Repair versus replacement cost comparison

Compare costs and expected usable life before deciding.

Three steps

1. Request a written repair quote
2. Compare alternatives and useful life
3. Consider safety and reliability

A worked example

Option	Repair
Upfront cost	80
Expected remaining life	2 years
Warranty	Check

An 80 repair over two years is 40 per estimated year.

Use qualified assessment for safety-critical items.

Repair versus replacement cost comparison

Use one row per item or decision. Start with what you know.

Option	Upfront cost	Expected remaining life	Warranty
